SUMMARY

Full-stack engineer with 4+ years building scalable web applications. Lead Front-End Engineer at TeamWave, where I led the Angular 17 migration across the SaaS suite, shipped an e-signature module, and built a high-performance CRM. Architected Chatvio, a full-stack AI chatbot platform with a RAG pipeline. I work primarily in React and Angular with TypeScript, and I'm open to front-end and full-stack roles.

SKILLS

React Angular TypeScript Node.js Express PostgreSQL Prisma Redux NgRx Zustand RxJS
Tailwind CSS Angular Material PrimeNG shadcn/ui Mantine Bootstrap Git

EXPERIENCE

Lead Front-End Engineer • TeamWave

Feb 2023 – Dec 2024

- Led the front-end migration to Angular 17 across the SaaS suite, modernizing legacy modules and setting the standards the team built against.
- Architected a modular Nx monorepo, improving scalability and letting product teams ship independently.
- Owned the CRM front end (Angular 17, NgRx, PrimeNG, AG Grid), focused on performance and interface consistency at enterprise data scale.
- Drove front-end architecture decisions and guided the team on state management and component design.

Associate Front-End Engineer • TeamWave

Feb 2021 – Feb 2023

- Built and shipped features across multiple products, including the Project Management module (React, Redux) — task handling, collaboration, and project tracking.
- Developed the internal Dashboard (Angular, NgRx, Angular Material) with reusable, accessible UI components.
- Contributed to the e-signature module (Angular, NgRx) and led the Unbanking.io landing page (Next.js, Tailwind), owning it from design to delivery.
- Grew from feature delivery into broader ownership of front-end quality and architecture.

PROJECTS

Chatvio (Personal)

chatvio.io

A full-stack SaaS platform for building, training, and embedding custom AI chatbots — RAG-based answers, document training, in-chat booking, and analytics.

React 19 • TypeScript • Express • PostgreSQL • pgvector • Prisma • Mantine • Tailwind

- Designed the product, UI, and full system architecture — data model, RAG pipeline, and how every piece fits together.
- Built a retrieval-augmented (RAG) chat flow using pgvector similarity search over document embeddings for context-aware answers.
- Designed an LLM-driven action system where the model detects intent (e.g. booking) and triggers structured flows mid-stream, with action tokens buffered server-side so they never leak to the client.
- Built document training (PDF / DOCX / text / Q&A + website crawling), an appointment-booking flow with availability and email confirmations, and an embeddable widget with domain whitelisting.
- Added an analytics dashboard (message/session metrics, geolocation, feedback) and chat history export (JSON / CSV / PDF).
- Integrated OpenRouter (per-chatbot model selection), HuggingFace embeddings, Cloudflare R2 storage, and Google OAuth; deployed across Vercel, Railway, and Neon.

TeamWave CRM (TeamWave)

The CRM product in TeamWave's enterprise SaaS suite — built for performance and interface consistency at scale across Deals, People, and Products, with rich, data-heavy tables and dedicated detail pages, all backed by NgRx state.

Angular 17 • **NgRx** • **PrimeNG** • **AG Grid** • **Nx Monorepo** • **RxJS**

- Built the core CRM data tables for Deals, People, and Products with in-table filtering, custom fields, and user-defined custom filters over large datasets.
- Developed per-entity detail pages with tag management, and modeled all state with NgRx for predictable, scalable data flow.
- Drove performance optimization and interface consistency across data-heavy views, scaling the app through modular implementation in an Nx monorepo.

TeamWave WorkAI (TeamWave)

An in-house, ChatGPT-style AI assistant — a conversational Q&A interface integrated with OpenAI, with support for custom, reusable prompts.

React • **Tailwind CSS** • **Mantine** • **OpenAI API**

- Built an internal ChatGPT-style Q&A interface integrated with the OpenAI API, giving the team a private AI assistant.
- Implemented a custom prompt system so users could create and reuse their own prompt templates.
- Designed the full chat UI — responsive, clean, and consistent with the product's design language.

PM, Dashboard & Support Analytics (TeamWave)

A set of internal TeamWave modules across the suite — the Project Management module, the internal Dashboard, and a support-ticket analytics page.

React • **Redux** • **Angular** • **NgRx** • **Angular Material**

- Built Project Management features (React, Redux) — task handling, team collaboration, and project tracking with reusable, scalable components.
- Developed the internal Dashboard (Angular, NgRx, Angular Material) with accessible, responsive components and component-level state.
- Built a support-ticket analytics page, surfacing ticket metrics and trends for the support team.

EDUCATION

B.Tech in Computer Science and Engineering

Aug 2015 – Jul 2019

Amal Jyothi College of Engineering · APJ Abdul Kalam Technological University
